Know Your Generator Is Ready With OmniMetrix Monitoring

OMNIMETRIX
GLOBAL MONITORING + CONTROL

Protect your investment, your home and your loved ones with affordable generator monitoring from OmniMetrix

OmniMetrix's innovative monitoring solutions can be found in numerous critical settings such as hospitals, universities and data centers. Our line of residential generator monitors is ready to protect what's most important to you – your home and your family.

HOW IT WORKS

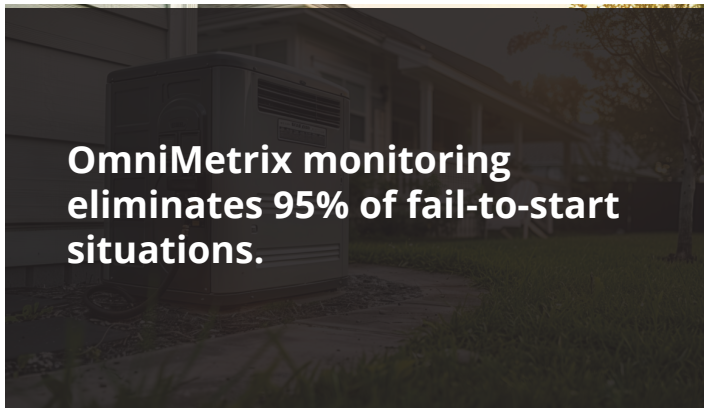
Once the OmniMetrix monitor is installed on your generator, it will run 24/7, collecting data, reviewing the data and alerting you and/or your dealer instantly if there is a problem. You determine how you receive alerts – via email, text message or mobile app*. You can also view reports on your desktop, tablet or smartphone through OmniView™, our web-based data management center.

If you receive an alert that your generator is in alarm/fault status, your technician will be able to view the diagnostics before climbing into a truck. This allows the technician to be better equipped for your service call, which means less down time for you!

Did you know that broken parts are usually not the reason your generator will fail to start? OmniMetrix monitoring gives you operational data and alerts you to the common problems that could cause your generator not to start, including::

- Low battery voltage
- Low coolant temperature
- Missed exercise
- Low fuel
- Unhandled alarms
- Plus many more!

For over 25 years OmniMetrix has been an M2M/IoT industry leader dedicated to enhancing the reliability of generators. **Compatible with ALL major generator brands,** OmniMetrix systems report vital operational data to you and your dealer – not just reporting problems, but preventing them.



OmniMetrix monitoring eliminates 95% of fail-to-start situations.
