OMNIMETRIX
GLOBAL MONITORING + CONTROL

SECURITY STATEMENT

Power your critical infrastructure with OmniMetrix® and turn security into a competitive advantage! Unlike many remote monitors available today, OmniMetrix devices, like the OMNI® and OMNIPRO®, are developed and built in house based on our new OCOM platform. Why does this matter? This means that our devices feature secure boot, which only allows for OmniMetrix code on our devices. Encrypted data provides superior protection against breaches, unlike the less customizable security in generic products. This approach grants full control over the security lifecycle, enabling tailored defenses, rapid patches, regulatory compliance, and long-term savings through reduced risks and downtime.

Our state-of-the-art cloud infrastructure, powered of Microsoft Azure, is managed 24/7 by a dedicated network operations center, backed by multiple layers of defense, redundant regional sites and encryption on all inbound and outbound traffic—so your sensitive data stays protected while your operations stay online. Our platform is tuned for always-on uptime, rock-solid protection and rapid disaster recovery—so your monitoring data is there, live and ready, exactly when you need it.

SECURE BOOT
Process that ensures only trusted software runs during start-up.

ENCRYPTED FLASH
Protects your stored data from any unauthorized access.

DEVICE ENCRYPTION
Secure communication between devices.

At OmniMetrix, security is in our DNA. On top of that, independent third-party auditors, a NIST-based security framework, real-time scanning, penetration testing and advanced email and endpoint protection all combine to mitigate your risk and safeguard your business.

OMNIMETRIX
GLOBAL MONITORING + CONTROL

SECURITY STATEMENT

From product design to day-to-day operations, our secure development lifecycle, continuous vulnerability assessments, and proven incident response plan keep you ahead of evolving threats. Our business continuity and disaster recovery program, with replicated data and geographically dispersed backup sites, helps keep you online—even when the unexpected hits.

The result for you? High confidence, low stress. With OmniMetrix, you gain a proactive, trusted partner protecting your data, your assets, and your reputation—so you can move faster, stay compliant, and focus on growing your business instead of guarding the perimeter.
